

INSTALLATION
ON-WALL OUTDOOR INDOOR SPEAKERS

TOS-600 v.2

Description

Enjoy music everywhere, where it matters the most!

The TOS series speakers are the ideal solution for outdoor and indoor sound systems. They deliver clean, natural, dynamic and powerful sound performance.

Most models are weather, UV and water resistant and they can be installed outdoors on terraces, in gardens, swimming pools and anywhere where the high quality of sound matters!

Stylish and eye-catching appearance and high-performance sound make this series perfect solution for various outdoors and indoors sound systems: at home (stereo and home theatre) or commercial (in bars, clubs, shops, conference rooms, etc.).

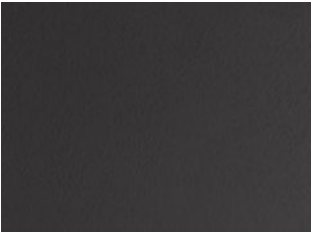

Mounting brackets provided with the speaker make installation very easy as well as speakers can be mounted horizontally and vertically.

Specification

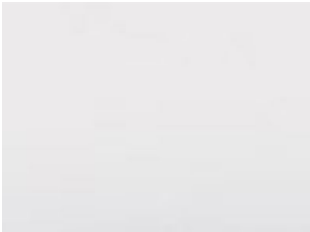

Design	Outdoor-Indoor
	IP44
	2-way
	TEC binding posts
Power handling	180W MAX 135W RMS
Frequency response	40Hz - 20kHz
Impedance	8ohm
Sensitivity	91dB
High-frequency driver	25 mm (1"), TPTTD
Bass-Midrange driver	165 mm (6.5")
Features / accessories	U mounting bracket
Dimensions (H x W x D or Dia x D)	32 x 19.5 x 19 cm
Weight	3 kg / pc.

Technology

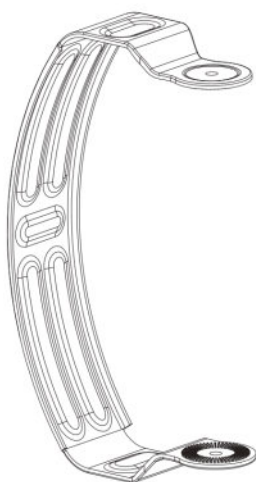

TOS Series

GRILL

Strong and rigid removable grills are weather, UV and water resistant (rust proof).

CABINET & MOUNTING BRACKETS

POLYMER CABINET - very rigid and strong to minimize distortions, vibrations or resonances. It is weather, UV and water resistant.

U MOUNTING BRACKETS - are extremely easy and safe to install. They allow for vertical and horizontal installation and speaker position adjustment horizontally after installation.

HIGH-FREQUENCY DRIVER

Depending on model:

TPTTD - Taga Pure Titanium Tweeter Dome with ferrofluid cooling can bear high power and its performance is very accurate, clear, smooth and detailed.

SILK or PEI DOME - tweeter is ferrofluid cooled and damped . The performance can be characterized as very accurate, clear, smooth and detailed as well as can handle high power inputs.

We pay special attention to equal and flat dispersion of sound in and off the axis of the driver.

SM (STEREO / MONO) models utilize 2 high-frequency drivers in one speaker and ensure high quality, dual-channel (stereo) sound from a single speaker. The SM models provide much wider dispersion than traditional speakers as well as eliminate sound imbalances which can be heard once listeners move around the area.

BASS-MIDRANGE DRIVER

We use robust polypropylene cones and heavy duty voice coils and coil formers are responsible for high power handling as well as deep, precise and detailed bass and rich, sweet midranges.

CROSSOVER

Selected models are equipped in a crossover system.

High quality, close-tolerance and precisely selected crossover components and internal wires for absolute sound neutrality, high long-term power and reliability.

BINDING POSTS

TEC – TAGA Easy Connection: all speakers use high quality push-in banana binding posts accepting raw speaker cables up to 10AWG and most popular types of connectors (banana or pin plugs). Our binding posts make your installation very easy task to do.
